SKY MOODSLIDER

INSTRUCTIONS

1. Unzip the folder.
2. Open the file named 'index.html' in a Google Chrome browser.
3. In the top right of the screen (see screenshot), click 'Upload Content'.

Upload Content

4. Open the file called 'testing' and select the content called 'programmeData.xml'.

DEVELOPER NOTES

- This application is mobile responsive and utilises the Bootstrap framework for this purpose.
- Sky's branding has been attempted to be replicated in this application.
- The Sky Toolkit has not been utilized for this project, future improvements could see this framework included for design consistency.
- Although Google Chrome is recommended, this application has been tested on all modern major browsers.
- For additional functionality, when selecting multiple sliders at the same time, the application offers suggestions based on the multiple moods the user has selected.
- This application ensures to pick movies at random, so if the same user uses the website more than once, they will get different suggestions (dependent on content data set size).
- All testing content data (programmeData.xml) is sourced from the Sky Cinema website.
